File: GFace.java

Although you have previously seen the code for `GFace.java`, we include it again here for completeness of the program above.

```

/*
 * File: GFace.java
 * -----
 * This class implements a face as a GCompound.
 */

// Note: only need acm.graphics since this is not
// actually a program, but just a class using graphics.
import acm.graphics.*;

/** Defines a compound GFace class */
public class GFace extends GCompound {

    /* Constants specifying feature size as a fraction of head size */
    private static final double EYE_WIDTH    = 0.15;
    private static final double EYE_HEIGHT   = 0.15;
    private static final double NOSE_WIDTH    = 0.15;
    private static final double NOSE_HEIGHT   = 0.10;
    private static final double MOUTH_WIDTH   = 0.50;
    private static final double MOUTH_HEIGHT  = 0.03;

    /* Private instance variables */
    private GOval head;
    private GOval leftEye, rightEye;
    private GPolygon nose;
    private GRect mouth;

    /** Creates a new GFace object with the specified dimensions */

```

```

public GFace(double width, double height) {
    head = new GOval(width, height);
    leftEye = new GOval(EYE_WIDTH * width, EYE_HEIGHT * height);
    rightEye = new GOval(EYE_WIDTH * width, EYE_HEIGHT * height);
    nose = createNose(NOSE_WIDTH * width, NOSE_HEIGHT * height);
    mouth = new GRect(MOUTH_WIDTH * width, MOUTH_HEIGHT * height);

    add(head, 0, 0);
    add(leftEye, (0.25 * width) - (EYE_WIDTH * width) / 2,
         (0.25 * height) - (EYE_HEIGHT * height) / 2);
